

First Time Setup Guide

In order to manage Learner devices, LeadMe will request special permissions upon first time login on a device.

First, LeadMe will request location access. Tap **Allow** to continue.

To begin setup for Learner devices

- Make sure a separate device is already logged in as a **Leader**, and that **Leader** and **Learner** devices are all connected to the same network
- Open the LeadMe app on the student device and select the **Learner** tab
- Select a **Leader** to connect with and enter a nickname to enter the setup process

Step 01: Accessibility

- Tap the **'Open Settings'** button to open accessibility settings (to open accessibility settings manually, open your device settings, search 'Accessibility', and select the result simply labelled **'Accessibility'**)
- Find the section labelled **'Downloaded Services'** (may also be labelled 'Downloaded Apps', or 'Services'), and select **LeadMe Edu**
- Toggle accessibility ON by tapping the switch
- A confirmation window will appear. Tap **'Okay'**, then return to LeadMe to proceed to Step 02

Step 02: App Overlay

- After returning to the LeadMe app, tap the **'Open Settings'** to open the app overlay settings (or search **'Display Over Other Apps'** in device settings and select 'LeadMe Edu').
- Toggle **'Allow display over other apps'** to ON by tapping the switch
- Tap the back arrow to return to LeadMe.

Allow Capturing for X-ray Monitoring

After setup and login, Learners will be prompted to allow capturing. This enables the Leader to 'X-ray' monitor a Learner, by streaming a live recording of Learner device activity for the Leader to view.

- Learners will need to tap **'Start'** to enable the capturing
- If a Learner selects 'Cancel', activity will not be captured but all other functionality will behave as normal
- You can re-prompt a Learner to start capturing by selecting the learner, and tapping the **'X-ray'** button
